

How Do Seeds Grow?

Plants are living things. Most plants start from seeds. Plants need water, air and sunlight in order to grow. Plant seeds are usually buried in soil.

Firstly, the seed cracks open and roots begin to grow. Roots suck water and nutrients from the soil.

After a few days, the stem begins to grow. As the stem grows thicker, leaves begin to grow.

Later, buds grow and develop into flowers. The flowers drop seeds on the ground. Sometimes the wind even blows the seeds elsewhere.

After the flowers die, the cycle starts again from the new seeds.
