

# Subtracting amounts of money

Choose whether to count up using Frog or take away for each subtraction.

1  $£56.80 - £10.10 = \square$

7  $£22 - £19.95 = \square$

2  $£60 - £47.86 = \square$

8  $£100 - £73.98 = \square$

3  $£7.94 - £0.48 = \square$

9  $£47.73 - £20.50 = \square$

4  $£35.80 - £4.30 = \square$

10  $£28.80 - £7.20 = \square$

5  $£40.50 - £38.75 = \square$

11  $£43.12 - £42.86 = \square$

6  $£22 - £2.50 = \square$

12  $£45.76 - £40 = \square$

Are these statements true or false?

- 13 If the larger number in a subtraction has two zeros, it is easier to use Frog than column subtraction.
- 14 If you are working out change, you should always use Frog.
- 15 If the number being subtracted is really small, it is best to take away or count back.

Write three subtraction questions. Write one that you think is best solved by using Frog, one by counting back, and one by using place value.

I am confident with choosing a mental method to subtract amounts of money.
